

Do you have memory problems?

Do you have lupus?

We are conducting a study to determine if an FDA-approved medication that may improve memory in some conditions will improve cognitive function in subjects with systemic lupus erythematosus.

This study involves four visits that will occur over 14 weeks at the Vanderbilt Clinical Research Center. You will be assigned study medication and labs will be drawn at each visit. All materials will be provided to you and you will not be asked to change your current treatment.

If you are interested, age 18-69, and meet the following criteria:

- Diagnosed with lupus
- Have cognitive impairment

PLEASE CONTACT: jon.williams@vumc.org or 615-875-9200

Compensation will be provided for your time
